

Office Ergonomics Risk Factors Checklist

Discomfort:	Possible Solutions:
Lower Back	 Sit back in the chair with lumbar supported (adjust chair back up/down for comfort) Check chair fit, especially seat pan depth and height Check adequate leg room (boxes, waste basket, files impeding foot/leg comfort) Monitor distance (arm's length or slightly more for 2 monitors) Feet not flat or supported (lower chair height or provide a footrest)
Eye Strain	 Verify monitors are at a minimum arm's length Provide anti-glare screen cover Change settings on the monitor(s) (zoom +/-, brightness, color) Look away from the monitor, focus on another object, every 15-20 minutes
Neck	 Confirm monitors are centered (inverted "V") if both used equally. Otherwise, dominant monitor should be positioned 60/40 in front of keyboard. Top of monitor(s) are at or just below eye level (if bi-focal glasses, lower monitor height to avoid head/neck tilting back)
Forearm	 Verify keyboard is within 3-4 inches of the edge of the desk (forearms not resting on the desk – may need to raise chair 1" and/or keyboard wrist rest) Only elbows should be resting on the armrests Mouse is immediately to the right (or left) of keyboard (forearm is not resting on the desk or armrest)
Shoulders	 Keyboard is within 3-4 inches of the edge of the desk Confirm mouse is immediately to the right (or left) of keyboard. Arms kept close to the torso while using mouse and typing Lower the work surface (or raise chair height 1-2"), upper arm/forearm at 90° angle Lower chair armrests Bring chair armrests in closer
Wrists	 Verify "flat wrists" while typing (lower stands on back of keyboard and/or provide gel wrist rest for keyboard) Confirm "flat wrists" while using the mouse Watch for correct posture when using the mouse (no side to side movement at the wrist, mouse from the elbow)
Back of Legs	 Lower the chair or lower the work surface Adjust seat pan depth release/push seat pan back (not all chairs have this feature). Provide a foot rest (if feet cannot be placed flat on the floor)

Discomfort	Possible Solutions
Hands	 Frequent breaks from keystroke entry (every 20 minutes) Perform hand stretching exercises (see below) Alternative pointing devices/mouse Learn keystroke shortcuts for menus
Muscle Fatigue	 Take mini-breaks every 45 minutes (walk, get drink, etc.) Chair that supports posture change, through movement, size, or easy adjustability Stand up, stretch arms, legs, etc. Move phone and printer to the other side of the office to force standing, or suggest standing when on phone Check chair fit (is chair designed for petite person, <5'4"; is chair designed for tall person >6'4") Consider Sit-stand work surface

Hand Stretching Exercises
